Critical and Historical Essays

This book contains the contributions presented at the 6th international KES conference on Smart Education and e-Learning (KES SEEL-2019), which took place at St. Julian's, Malta, June 17–19, 2019. It contains fifty-five high-quality peer-reviewed papers that are grouped into several interconnected parts: Part 1 – Smart Education, Part 2 – Smart e-Learning, Part 3 – Smart Pedagogy, Part 4 – Smart Education: Systems and Technology, Part 5 – Smart Education: Case Studies and Research, Part 6 – Students with Disabilities and Smart Education/University, and Part 7 – Mathematical Modelling of Smart Education and Economics of Smart University. Smart education and smart e-learning are emerging and rapidly growing areas with the potential to transform existing teaching strategies, learning environments, and educational activities and technology in the classroom. Smart education and smart e-learning focus on enabling instructors to develop new ways of achieving excellence in teaching in highly technological smart classrooms, and providing students with new opportunities to maximize their success and select the best options for their education, location and learning style, as well as the mode of content delivery. This book serves as a useful source of research data and valuable information on current research projects, best practices and case studies for faculty, scholars, Ph.D. students, administrators, and practitioners – all those who are interested in smart education and smart e-learning.

Rationalizing Culture

From leading experts who have trained thousands of professionals in dialectical behavior therapy (DBT), this manual provides indispensable tools for treating adolescents with emotional or behavioral problems of any level of severity. Clinicians are guided step by step to teach teens and parents five sets of skills: Mindfulness, Distress Tolerance, Walking the Middle Path (a family-based module developed by the authors specifically for teens), Emotion Regulation, and Interpersonal Effectiveness. Designed for optimal clinical utility, the book features session outlines, teaching notes, discussion points, examples, homework assignments, and 85 reproducible handouts, in a large-size format for easy photocopying. Purchasers also get access to a Web page where they can download and print the reproducible materials. See also the authors' Dialectical Behavior Therapy with Suicidal Adolescents (with Marsha M. Linehan), which delves into skills training and other DBT components for those at highest risk.

Teaching General Music

Televised Music Instruction

The Educational Bi-monthly

The Canada School Journal

Unlike their colleagues in music theory and music education, teachers of music history have tended not to commit their pedagogical ideas to print. This collection of essays seeks to help redress the balance, providing advice and guidance to those who teach a college-level music history or music appreciation course, be they a graduate student setting out on their teaching career, or a seasoned professor having to teach outside his or her speciality. Divided into four sections, the book covers the basic music history survey usually taken by music majors; music appreciation and introductory courses aimed at non-majors; special topic courses such as women and music, music for film and American music; and more general issues such as writing, using anthologies, and approaches to teaching in various situations. In addition to these specific areas, broader themes emerge across the essays. These include how to integrate social

history and cultural context into music history teaching; the shift away from the 'classical canon'; and how to organize a course taking into consideration time constraints and the need to appeal to students from a diverse range of backgrounds. With contributions from both teachers approaching retirement and those at the start of their careers, this volume provides a spectrum of experience which will prove valuable to all teachers of music history.

A Guide to Effective Music Supervision

General music is informed by a variety of teaching approaches and methods. These pedagogical frameworks guide teachers in planning and implementing instruction. Established approaches to teaching general music must be understood, critically examined, and possibly re-imagined for their potential in school and community music education programs. Teaching General Music brings together the top scholars and practitioners in general music education to create a panoramic view of general music pedagogy and to provide critical lenses through which to view these frameworks. The collection includes an examination of the most prevalent approaches to teaching general music, including Dalcroze, Informal Learning, Interdisciplinary, Kodály, Music Learning Theory, Orff Schulwerk, Social Constructivism, and World Music Pedagogy. In addition, it provides critical analyses of general music and teaching systems, in light of the ways children around the world experience music in their lives. Rather than promoting or advocating for any single approach to teaching music, this book presents the various approaches in conversation with one another. Highlighting the perceived and documented benefits, limits, challenges, and potentials of each, Teaching General Music offers myriad lenses through which to re-read, re-think, and re-practice these approaches.

Preparing for Blended E-learning

This volume includes extended and revised versions of a set of selected papers from the 2011 2nd International Conference on Education and Educational Technology (EET 2011) held in Chengdu, China, October 1-2, 2011. The mission of EET 2011 Volume 1 is to provide a forum for researchers, educators, engineers, and government officials involved in the general areas of education and educational technology to disseminate their latest research results and exchange views on the future research directions of these fields. 130 related topic papers were selected into this volume. All the papers were reviewed by 2 program committee members and selected by the volume editor Prof. Yuanzhi Wang, from Intelligent Information Technology Application Research Association, Hong Kong. The conference will bring together leading researchers, engineers and scientists in the domain of interest. We hope every participant can have a good opportunity to exchange their research ideas and results and to discuss the state of the art in the areas of the education and educational technology.

Living the Good Life

The focus of this book is on exploring effective strategies in higher education that promote meaningful learning and go beyond discipline boundaries, with a special emphasis on Subjectivity Learning, Refreshing Lecturing, Learning through Construction, Learning through Transaction, Transformative Learning, Using Technology, and Assessment for Learning and Teaching in

particular. The research collected in this book is all based on empirical studies and includes research methods and findings that will be of great interest to teachers and researchers in the area of higher education. The main benefit readers will derive from this book is a meaningful insight into what other teachers around the world are doing in higher education and what lessons they have learned, which will support them in their own teaching.

Flowers in the Dustbin

Blended and online learning skills are rapidly becoming essential for effective teaching and learning in universities and colleges. Covering theory where useful but maintaining an emphasis on practice, this book provides teachers and lecturers with an accessible introduction to e-learning. Beginning by exploring the meaning of 'e-learning', it supports tutors in identifying how they plan to use technology to support courses that blend online and face-to-face interactions. Illustrated by a range of case of studies, the book covers: designing quality, appropriate effective and online learning efficient and sustainable e-learning activity providing appropriate feedback to learners devising student activities and sourcing learning resources managing online and offline interactions Packed with practical advice and ideas, this book provides the core skills and knowledge that teachers in HE and FE need when starting out and further developing their teaching course design for blended and online learning.

The author of the New York Times bestseller This Is Your Brain on Music reveals music's role in the evolution of human culture in this thought-provoking book that "will leave you awestruck" (The New York Times). Daniel J. Levitin's astounding debut bestseller, This Is Your Brain on Music, enthralled and delighted readers as it transformed our understanding of how music gets in our heads and stays there. Now in his second New York Times bestseller, his genius for combining science and art reveals how music shaped humanity across cultures and throughout history. Here he identifies six fundamental song functions or types—friendship, joy, comfort, religion, knowledge, and love—then shows how each in its own way has enabled the social bonding necessary for human culture and society to evolve. He shows, in effect, how these "six songs" work in our brains to preserve the emotional history of our lives and species. Dr. Levitin combines cutting-edge scientific research from his music cognition lab at McGill University and work in an array of related fields; his own sometimes hilarious experiences in the music business; and illuminating interviews with musicians such as Sting and David Byrne, as well as conductors, anthropologists, and evolutionary biologists. The World in Six Songs is, ultimately,

a revolution in our understanding of how human nature evolved—right up to the iPod.

The World in Six Songs

Anthropologist Georgina Born presents one of the first ethnographies of a powerful western cultural organization, the renowned Institut de Recherche et de Coordination Acoustique/Musique (IRCAM) in Paris. As a year-long participant-observer, Born studied the social and cultural economy of an institution for research and production of avant-garde and computer music. She gives a unique portrait of IRCAM's composers, computer scientists, technicians, and secretaries, interrogating the effects of the cultural philosophy of the controversial avant-garde composer, Pierre Boulez, who directed the institute until 1992. Born depicts a major artistic institution trying to maintain its status and legitimacy in an era increasingly dominated by market forces, and in a volatile political and cultural climate. She illuminates the erosion of the legitimacy of art and science in the face of growing commercial and political pressures. By tracing how IRCAM has tried to accomodate these pressures while preserving its autonomy, Born reveals the contradictory effects of institutionalizing an avant-garde. Contrary to those who see postmodernism representing an accord between high and popular culture, Born stresses the continuities between modernism and postmodernism and how postmodernism itself embodies an implicit antagonism toward popular culture.

The Order of Time

This book provides a descriptive, progressive narrative on the flipped classroom including its history, connection to theory, structure, and strategies for implementation. Important questions to consider when evaluating the purpose and effectiveness of flipping are answered. The book also highlights case studies of flipped higher education classrooms within five different subject areas. Each case study is similarly structured to highlight the reasons behind flipping, principles guiding flipped instructions, strategies used, and lessons learned. An appendix that contains lesson plans, course schedules, and descriptions of specific activities is also included.

One of TIME's Ten Best Nonfiction Books of the Decade "Meet the new Stephen Hawking . . . The Order of Time is a dazzling book." --The Sunday Times From the bestselling author of Seven Brief Lessons on Physics, comes a concise, elegant exploration of time. Why do we remember the past and not the future? What does it mean for time to "flow"? Do we exist in time or does time exist in us? In lyric, accessible prose, Carlo Rovelli invites us to consider questions about the nature of time that continue to puzzle physicists and philosophers alike. For most readers this is unfamiliar terrain. We all experience time, but the more scientists learn about it, the more mysterious it remains. We think of it as uniform and universal, moving steadily from past to future, measured by clocks. Rovelli tears down these assumptions one by one, revealing a strange universe where at the most fundamental level time disappears. He explains how the theory of quantum gravity attempts to understand and give meaning to the resulting extreme landscape of this timeless world. Weaving together ideas from philosophy, science and literature, he suggests that our perception of the flow of time depends on our perspective, better understood starting from the structure of our brain and emotions than from the physical universe. Already a bestseller in Italy, and written with the poetic vitality that made Seven Brief Lessons on Physics so appealing, The Order of Time offers a profoundly intelligent, culturally rich, novel appreciation of the mysteries of time.
